## SAFLOK 700 by Elphick Proome Architects

**George Elphick, Elphick Proome Architects:** "We have used Safintra products for various high-profile developments nationally and had that much faith in the quality and brand that we decided to use SAFLOK 700 as a roofing solution for our own EPA Studio in Westville. The building has won numerous architectural awards of which we are really proud."

Safintra roll-forms steel roof sheeting in a range of profiles that fulfill the most demanding artistic, design and engineering parameters.

The Saflok concealed fix profile is available in Saflok 700 (ideal for inland conditions) and the new Saflok 410 for challenging wind load conditions on the coast. Mobile mills enable Saflok roof cladding to be rolled on site in continuous lengths of up to 120 metres.

Exclusive Safintra pierce fix profiles include Widedek, Trimflute and Versatile. We also produce the ever-appealing Corrugated and IBR profiles, as well as a wide range of roofing accessories, louvres, ventilators and cold formed sections (CFC).

Our vast experience in the building industry is backed up with local roll forming operations and full technical support services in 6 centres in South Africa, plus Mozambique, Malawi, Zambia and Tanzania in SADC.
